

Main connector

Power supply

This DCDC circuit is able to supply 5V@5A switching and 3V3@800mA. Maximum input voltage is 28V.

Sheet: /
File: hw-fenice-evo-steering-wheel.kicad_sch

Title: EA-02B Steering Wheel

Size: A4 Date: 2023-01-20

KiCad E.D.A. kicad (6.0.8)

Rev: 1.0

Id: 1/5

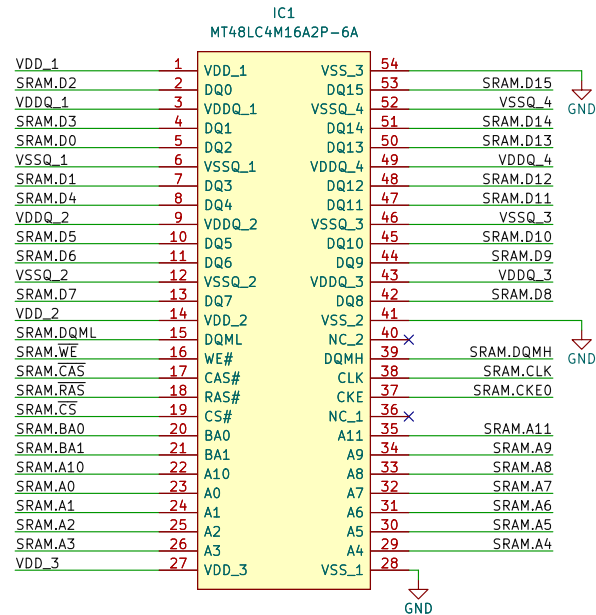

SDRAM

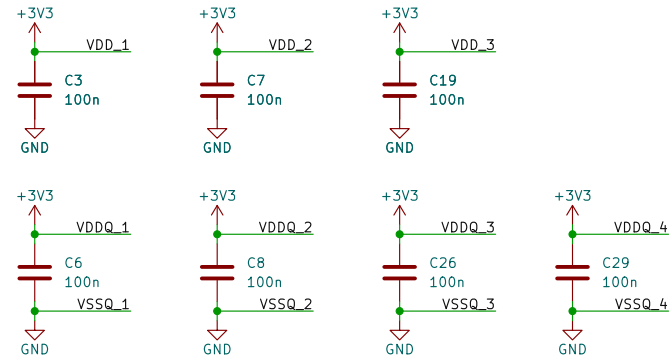

Swap map (SRAM - FMC)

D0 - D2
D1 - D3
D2 - D0
D3 - D1

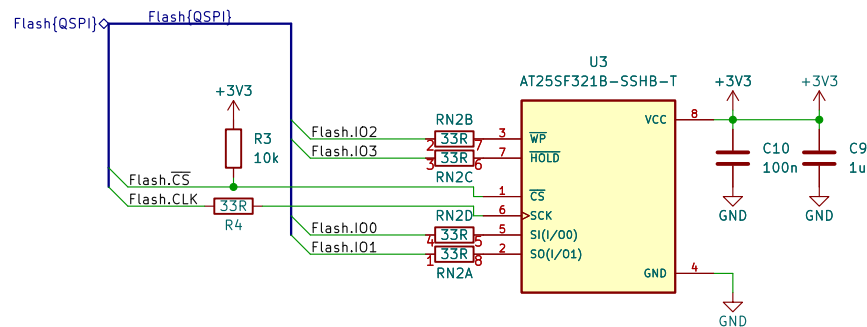

SRAM{FMC} ↔ SRAM{FMC}

Traces should be 50[Ohm] with controlled impedance

QUAD-SPI FLASH MEMORY

DISPLAY: EA TFT050-84ANN
Size: 5 inch
Dimensions: 800*480
Protocol: RGB TFT

Backlight supply

VLED:
- typ: 27[V]
- nom: 30[V]
- max: 34[V]
ILED = 40[mA]

Feedback resistor sizing:

$V_{FB} = 1.225[V]$
 $I_{LED} = V_{FB}/R_{SENSE}$

$I_{MAX} = 50[mA] \rightarrow R_{SENSE} = 1.225[V]/0.05[A] = 24.5[Ohm]$
 $I_{Nom} = 40[mA] \rightarrow R_{SENSE} = 1.225[V]/0.04[A] = 30.6[Ohm]$

$I_{MAX_ACTUAL} = 1.225[V]/25[Ohm] = 49[mA]$
 $P_{MAX} = R \cdot I^2 = 25 \cdot (0.049)^2 = 60[mW]$

If CTRL is below 1.225[V] its value will override Vfb, resulting in a lowering of the output current following the formulas above with the new Vfb.

If no control is desired, keep CTRL above 1.5[V]

RGB TFT parallel connector

Left LEDs

Right LEDs

Address is not configurable and depends on purchased version:
KTD2052A/B: 0x74
KTD2052C/D: 0x75

—B/D versions breathe at powerup and on reset
—A/C stay off by default

Drivers are designed for 4xRGB and have fixed 25% duty cycle
